

MAJOR FUNCTION

This is an apprentice training program designed to provide the knowledge, skill and experience needed to qualify for Water Analyst. The apprenticeship experience consists of study and work in the respective specialized area. Class incumbents must make satisfactory progress as the training program develops to include more complex and hazardous demands. Work is performed in accordance with established policies and procedures under the general direction of supervisory or journeyman level workers. Work is reviewed through inspection of work in progress and upon completion. Advancement in the apprenticeship program will be dependent upon successful demonstration of mastery of the required competencies for the applicable apprenticeship progression.

ESSENTIAL AND OTHER IMPORTANT JOB DUTIES**Essential Duties**

Assists in performing quantitative chemical analyses of water used in various plant systems and addition of water treatment additives as required. Assists in preparing and mixing chemicals. Assists in maintaining chlorination systems and cooling tower acid systems. Assists in general maintenance work on system equipment in the lab. Assists in the operation of water purification equipment for periodic regeneration and routine maintenance. Makes quantitative and qualitative analysis of water used in the generation of steam. Makes adjustments to power plant water system based on the analysis of the water. Maintains all plant lab records, orders laboratory chemicals and calibrates laboratory equipment as directed. Performs related work as required.

Other Important Duties

Assists in maintaining records and reports. Performs clean-up in the general work area when regular assignments are completed. Attends various training courses and engages in independent study of power plant equipment operations and maintenance. Performs related work as required.

DESIRABLE QUALIFICATIONS**Knowledge, Abilities and Skills**

Progressively increasing knowledge of methods and technology essential to the appropriate line of progression. Progressively increasing knowledge of power plant operations and maintenance practices and procedures. Progressively increasing knowledge of applicable safety work practices and rules. Progressively increasing knowledge of occupational and environmental hazards associated with general maintenance and operations.
