

## Memorandum

To: Assistant City Manager Cynthia Barber

From: Chief Michael DeLeo on behalf of the Community Leadership Council on Gun Violence

Re: Status and Recommendation

Date: January 18, 2016

---

### Background

On August 14, 2014, a concerned group of citizens met to discuss what steps should be taken to address the gun violence in Tallahassee. The impetus for creating the Community Leadership Council on Gun Violence was a growing awareness of gun violence throughout Tallahassee. Violent crime, especially gun violence, is high in our community and well above the state average. The group was charged with evaluating solutions to addressing this community-wide challenge.

### Assessment

A significant amount of time has been spent delving into detailed crime data to determine the most appropriate direction for plan development. The Council's research resulted in identification of suspect/victim demographics and specific neighborhoods where prevention and intervention programs should be focused. The race and sex of suspects and victims was reviewed for citywide incidents involving a violent crime where a firearm was used during the period 2011-2013. The results of the statistical review clearly showed that black males ages 18-29 make up the majority of offenders and victims. The 2014 analysis (attached) revealed the same trend.

The Council has also evaluated the economic impact of gun violence in Tallahassee. Dr. Dale Brill conducted an assessment of firearm-related assaults. Total projected cost estimates (society and government) in Tallahassee for violence involving a firearm or related instrument in 2014 equaled \$69,909,611. Murder resulted in the greatest projected loss of more than \$51 million chiefly as a result of the economic activity lost from premature end of life. Each murder carries a total cost of nearly \$5.7 million. These projections are considered conservative by comparison to the "value of a statistical life" of \$9.2 million used by the US Department of Transportation.

Costs associated with firearm-related, assault injuries requiring hospital admittance in 2014 are projected at more than \$14.7 million or \$475,152 per incident. Less severe injuries with the same reported cause in 2014 totaled more than \$4 million or \$131,735 per incident. Dr. Brill's report is attached.

The Council evaluated several violence prevention programs, and identified Cure Violence as an evidence based program that has resulted in significant decrease in shootings where it has been implemented. Cure Violence is a health based violence prevention model that has reduced shootings by 20% – 73% where it has been properly implemented. Cure Violence has been independently evaluated by CDC/Johns Hopkins, NIJ/Northwestern, and BJA/Center for Court

Innovation. Members of the Council visited the Cure Violence headquarters in June 2015 to conduct site visits and evaluate the program. After their review, representatives of Cure Violence visited Tallahassee to conduct an assessment on the viability of the program being implemented here. A copy of Cure Violence's assessment is attached.

#### Future Steps

There are three primary challenges if the City decides to adopt the Cure Violence model: funding, structure, and location.

The estimated first year cost of implementing the model at one pilot site is \$400,000 – \$450,000. Approximately \$75,000 covers the administrative and support costs collected by the parent organization; the remaining \$325,000 - \$375,000 stays in our community, primarily for the salary and benefits of local employees. Initially, the City could fund the pilot site, and seek grant funding from federal grants or private foundations for future years and/or sites.

The local organizational structure would need to be determined. There are two primary options: the City could adopt the program and implement it in an existing department, or the City could have a local non-profit organization manage the program. Both options have pros and cons that can be evaluated further if the city decides to adopt the Cure Violence model. A city department would give the administration better oversight and fiscal control, but limit the effectiveness of the model as it may be viewed as an extension of law enforcement. The City would have to clearly communicate that the department administering the Cure Violence model was not part of TPD. A local non-profit organization may establish trust and build effective relationships more quickly than a governmental entity; however, identifying a local NPO that has experience running this type of violence prevention program may prove daunting. Members of the Community Leadership Council on Gun Violence could serve in an advisory capacity regardless of the organizational structure.

The final challenge is determining the location of the pilot site. Both the Greater Frenchtown/Griffin Heights and South City areas have a clear need for a violence prevention program. However, with any new endeavor, there is a learning process and it would be even more challenging to attempt simultaneous implementation of two different sites. The City would have to select a pilot site or commit to funding two locations which would increase the cost substantially.

#### Recommendation

The Community Leadership Council on Gun Violence is recommending that the City of Tallahassee adopt, fund, and implement the health based, violence prevention model Cure Violence.

## TALLAHASSEE POLICE DEPARTMENT CRIME ANALYSIS UNIT

234 East 7<sup>th</sup> Avenue  
Tallahassee, Florida 32303

March 23, 2015

To: Angie Hemanes  
Office of the Chief

From: Annie Thompson, CAU Supervisor  
Antwan Wiley, Crime Analyst

Subject: Gun Violence 2014 - Update

Thank you for your recent contact with the City of Tallahassee Police Department Trends and Tactics Section (Crime Analysis Unit). In response to your request to update the 2014 gun violence data, please review the following information and attached documents. Analysis was conducted and information released pursuant to Chapter 119 of the Florida State Statutes. The primary statistical and/or geographical data source(s) used to complete this request was/were:

- ☐ PremierOne™ Computer Aided Dispatch (CAD)
- ☐ Printrak Computer Aided Dispatch (CAD)
- ☒ Printrak Law Records Management System (LRMS)
- ☐ Hummingbird Business Intelligence (BI) Query
- ☒ Omega CrimeView ® and ArcGIS
- ☐ Traffic and Criminal Software (TraCS)
- ☒ Uniform Crime Reports (UCR)

**Time Period:** 1/1/14 – 12 /31/14

**Area:** Citywide

**Description of Product Requested:**

The CAU was requested to update the gun violence data for 2014. The aggregate data for 2011-2014 was also updated. Corresponding hotspot maps for locations, suspect addresses, and victim addresses are also included. The Records Management Section provided the UCR data.

**Exceptions or Exclusions:** Not Applicable

**Reason:** Not Applicable

**Time Spent on Request:** 28 hours

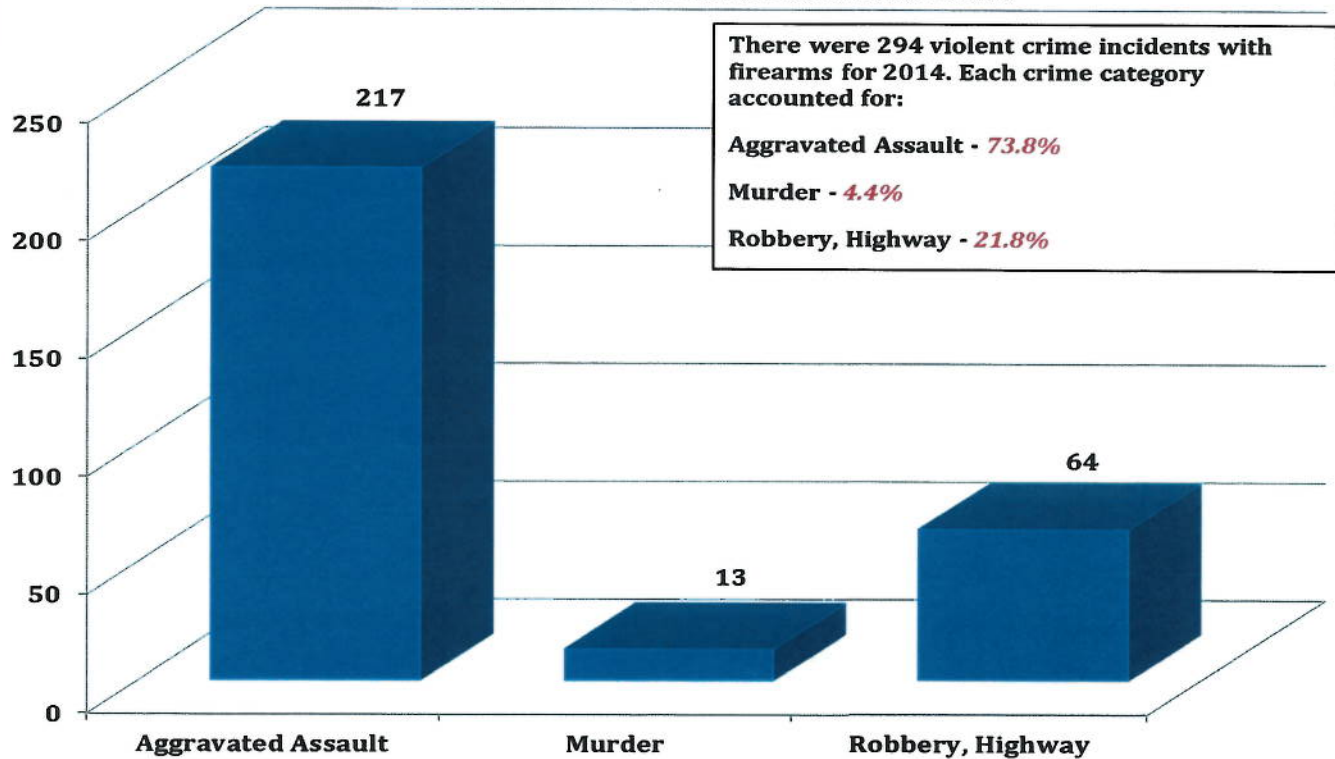

If you should have any questions or concerns, please feel free to contact the Crime Analysis Unit. This report was completed by Annie Thompson, Crime Analysis Unit Supervisor, (850) 891-4307, and Crime Analyst Antwan Wiley, (850) 891-4308.

Attachment: Yes

### UCR Violent Crimes with Firearms for 2014

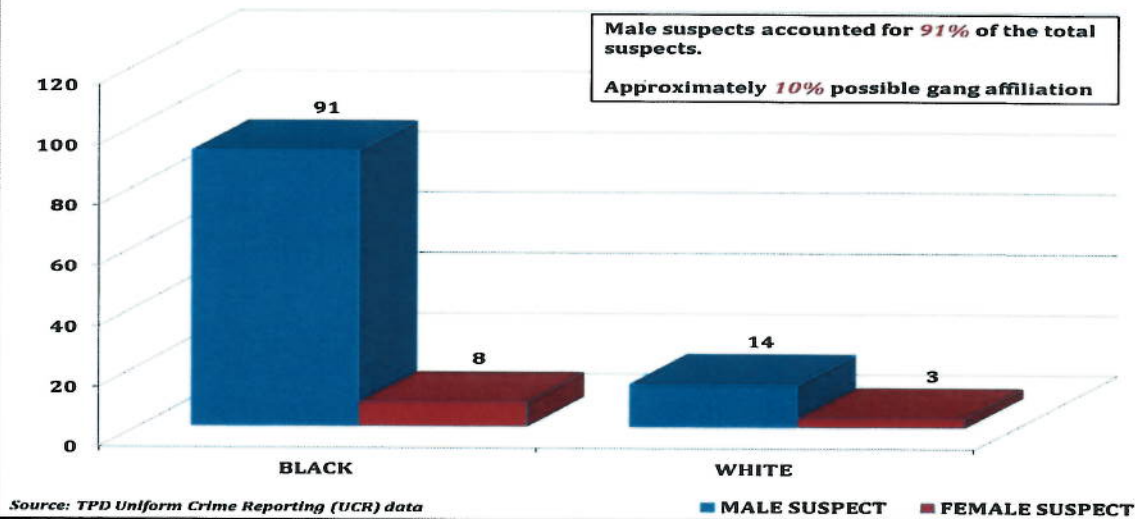

Source: TPD Uniform Crime Reporting (UCR) data

Highlights from 2014 UCR violent crimes with firearms indicate the following:

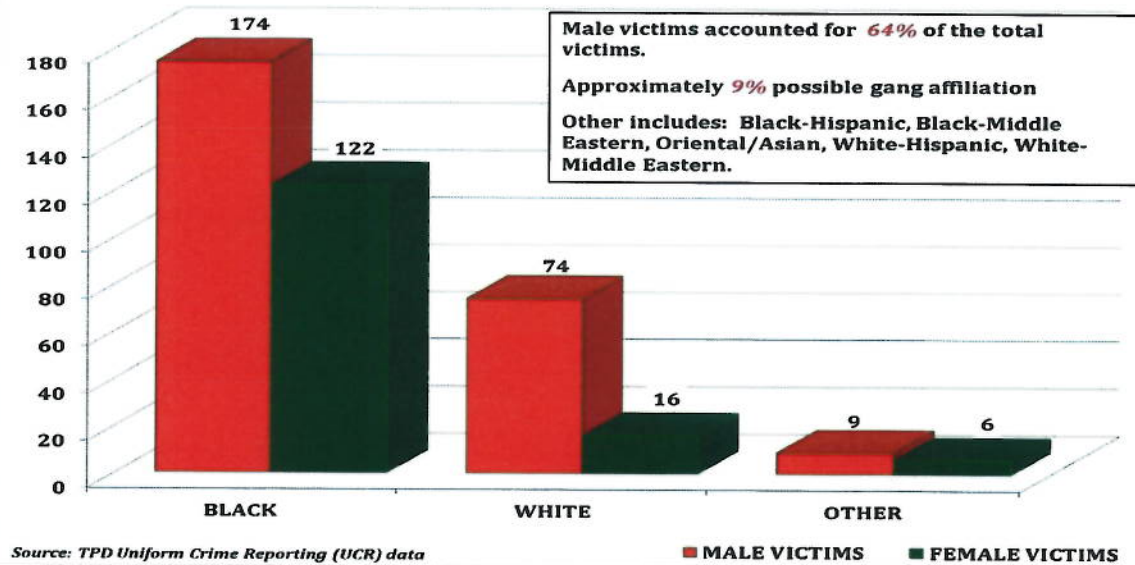

- Based on the 2014 Uniform Crime Reporting (UCR) data, there were 294 incidents with firearms for 2014. These incidents consisted of the following: aggravated assaults (217) which accounted for 73.8%, murder (13) which accounted for 4.4%, and street robbery (also known as highway robbery) (64) which accounted for 21.8%.
- Male suspects accounted for 91% of the total suspects. Of the 116 suspects, there were 91 Black males, 14 White males, eight (8) Black females, and three (3) White females.
- Male victims accounted for 64% of the total victims. Of the 401 victims, there were 174 Black males, 122 Black females, 74 White males, 16 White females, nine (9) Other males, and nine (9) Other females. For the purpose of this review, the Other category includes Black-Hispanic, Black-Middle Eastern, Oriental/Asian, White-Hispanic, and White-Middle Eastern.
- There was not a significant gang affiliation for suspects or victims. For the suspects, approximately 10% of the incidents had a possible gang affiliation. For the victims, approximately 9% of the incidents had a possible gang affiliation.
- The most prevalent ages for suspects and victims were in the 18-24 age group. More specifically, suspects in the 18-24 age group accounted for 53% (61) of the suspect total; victims in the 18-24 age group accounted for 43% (171) of the victim total. The oldest suspect was 47 years of age and the oldest victim was 84 years of age.
- Hotspot maps for incident locations and addresses for suspects and victims are also attached.

### UCR Violent Crimes with Firearms for 2011, 2012, 2013, 2014

Based on UCR, the aggregate total of violent crimes with firearms for 2011-2014 is **1,108**. The aggregate total includes aggravated assault, murder, manslaughter, and street robbery.

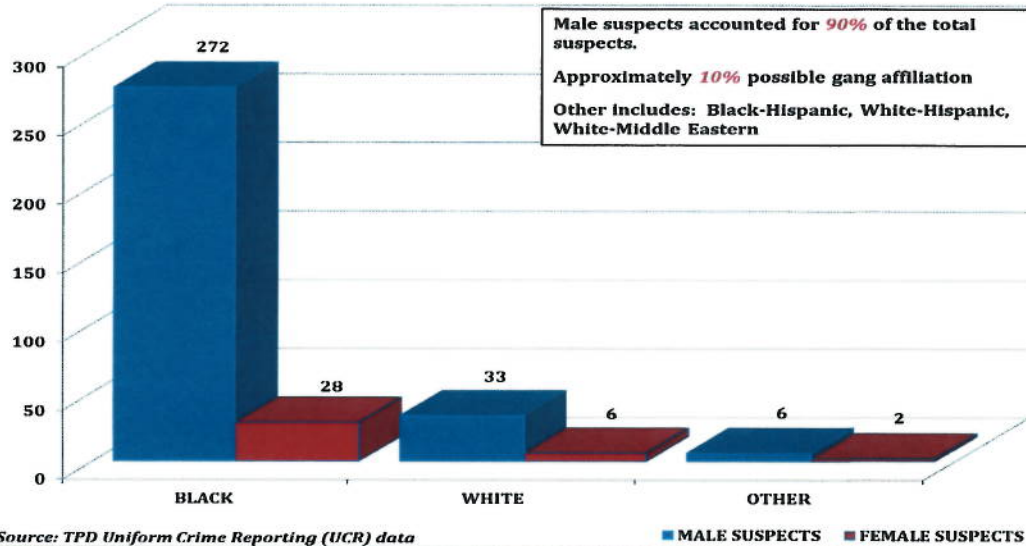

Highlights from the aggregate 2011-2014 UCR violent crimes with firearms indicate the following:

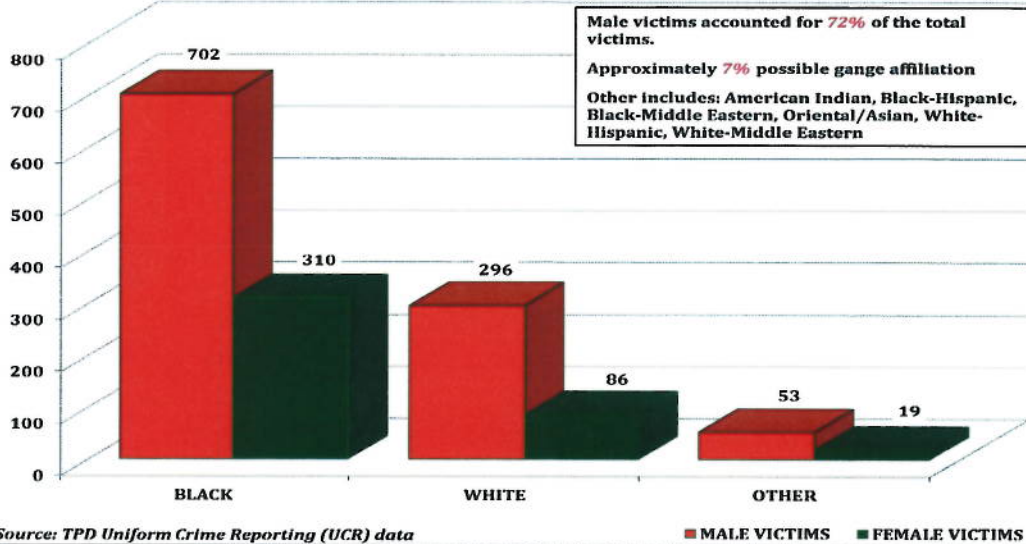

- The aggregate total of UCR violent crimes with firearms for 2011-2014 consisted of 1,108 incidents. Of the aggregate total, 2011 (270) accounted for 24.4%, 2012 (301) accounted for 27.2%, 2013 (243) accounted for 21.9%, and 2014 (294) accounted for 26.5%.
- Male suspects accounted for 90% of the total suspects. Of the 347 suspects, there were 272 Black males, 33 White males, 28 Black females, six (6) White females, six (6) Other males, and two (2) Other females.
- Male victims accounted for 72% of the total victims. Of the 1,466 victims, there were 702 Black males, 310 Black females, 296 White males, 86 White females, 53 Other males, and 19 Other females. For the purpose of this review, the Other category includes American Indian, Black-Hispanic, Black-Middle Eastern, Oriental/Asian, White-Hispanic, and White-Middle Eastern.
- There was not a significant gang affiliation for suspects or victims. For the suspects, approximately 10% of the incidents had a possible gang affiliation. For the victims, approximately 7% of the incidents had a possible gang affiliation.
- The most prevalent ages for suspects and victims were in the 18-24 age group. More specifically, suspects in the 18-24 age group accounted for 49% (169) of the suspect total; victims in the 18-24 age group accounted for 46% (681) of the victim total. The oldest suspect was 47 years of age and the oldest victim was 84 years of age.
- Hotspot maps for incident locations and addresses for suspects and victims are also attached.

To: Chief Michael DeLeo, Tallahassee Police Department  
From: Dale A. Brill, Ed Clark and Gloria Pugh  
Date: July 16, 2015  
Re: Estimated Costs of Firearm-related Assaults in 2014

Below please find estimated costs projected as those incurred by society and government as a result of reported murder and assault involving a firearm or related weapon in Tallahassee during 2014. As with any economic model, transparency in communicating the assumptions is critical to both the understanding and credibility of the estimates presented. Accordingly, our projections are accompanied by attachments revealing the detail supporting the model and resulting calculations.

## **COST AND MODEL ASSUMPTIONS**

Cost assumptions were taken from a model developed by Dr. Ted R. Miller, Principal Research Scientist, Children's Safety Network Economics and Data Analysis Resource Center, at Pacific Institute for Research and Evaluation, in December 2012. This model is widely cited in the literature and popular press and is therefore deemed credible. Using Dr. Miller's model replaces any laborious attempt to create a model from scratch, which we determined to be impossible given our budget and time constraints.

Two cost categories are presented as incurred by Society and Government, respectively, and incorporated into the calculations specific to Tallahassee as reflected on pages 3 and 4 of this memo. The original source, produced by the Children's Safety Network, is provided as an attachment. Three types of injury are used in the model. Fatal injuries, of course, are those resulting in death. Degrees of injury are split into two sub-types: The first capturing those that required hospitalization; and the second reflects emergency department treatment and release.

## **INCIDENT COUNTS**

Two sources served as the basis for incident counts. The preliminary Uniform Crime Report for 2014 filed with Florida's Department of Law Enforcement (FDLE) by the Tallahassee Police Department (TPD) provided data for murders using a firearm. There were nine. A spreadsheet containing data compiled upon our special request by Tallahassee Memorial Hospital (TMH) staff provided data for firearm related injuries, excluding those coded as suicide or accidents. Limiting the calculations to TMH data naturally omits incidents where either (a) treatment was provided by alternative facilities or (b) the incident was unreported.

TMH codes indicated whether the injuries were treated within its Emergency Department (Bixler) or required transfer to a bed (admittance) within the hospital. There were 31 of each kind with two cases, having been coded for recurring Wound Center treatment, excluded from the calculations. Eighty-one incidents coded by TMH as accidents were also excluded.

## **MEMORANDUM**

## **SITE VISIT ASSESSMENT REPORT: TALLAHASSEE, FLORIDA**

Cure Violence is a unique, interdisciplinary, public health approach to violence prevention. The CV approach maintains that violence is a learned behavior that can be prevented using disease control methods. Using proven public health methodology, the model uses a three-prong approach to violence prevention: 1) Detecting and interrupting the transmission of the disease, 2) Treating those at highest risk; 3) Mobilizing the community to change norms.

This report seeks to describe the feasibility of implementing the CV model in Tallahassee, Florida. The CV model can only be adapted to the context of Tallahassee if local institutional and individual capacities exist to implement its three main components. To evaluate these capacities, an assessment visit was performed to answer the following questions:

- 1) Is there a governmental or non-governmental agency with the capacity and will to implement the CV model with fidelity?
- 2) Does official and/or unofficial data documenting violent incidents exist in order to focus and monitor the implementation of the model?
- 3) Does official and/or unofficial data exist regarding the nature of violent incidents to determine if the CV model is appropriate?
- 4) Does official and unofficial data exist to create criteria to identify the high risk target population for focusing implementation of the model?
- 5) Do community organizations or hospital trauma units exist who fit the CV criteria to serve as implementation partners?
- 6) Do individuals exist who could fulfill the role of Violence Interrupters and/or Outreach Workers?
- 7) Are there agencies/organizations currently providing, or with the capacity to provide, support services for the highest risk?

The following is a summary of the initial assessment visit. This is a preliminary report and briefly highlights key elements of the visit. Should implementation proceed, additional consultation will be provided to discuss next steps, answer additional questions, and develop a specialized implementation plan specific to the needs and nuances of Tallahassee, Florida.

## **Data Analysis**

Prior to the assessment visit, CV was provided with ample data detailing hot spot locations, firearm incident locations, including suspect/victim overlay, UCR crimes with firearms, community demographics, and crime analysis of select firearm incidents for the period of 2011-2014.

Initial review of the data supported Tallahassee's selection of South City and Frenchtown/Griffin Heights as potential target areas for a CV project.

## **Assessment Visit Review**

### **Tallahassee Police Department Meeting**

In meeting with Police Chief Michael DeLeo and Tallahassee Police Department (TPD) staff, additional information was gathered with regards to the underlying issues surrounding violent events, the structure of gangs/cliques within the city, and the police department's efforts to tackle the issue.

### **Key Data Points**

Data review and discussion highlighted many similarities between Tallahassee and other cities that are currently implementing the CV model:

- Majority of violent incident suspects are males (90%)
- Majority of violent incident suspects are of color (300 of 347; 86%)
- Majority of violent incident victims are males (72%)
- Majority of violent incident victims are of color (1012 of 1466; 69%)
- Majority of both victims and suspects ages 18-24
- Positive gang affiliation less likely due to involvement in local/neighborhood "groups"

Violence among "crews" is similar to what we have seen in other implementing cities. Individuals are often resorting to violence in response to petty issues. Underlying factors involving interpersonal relationships, small amounts of monies, and disputes over respect, or lack thereof, are common place. These underlying issues are primarily behavioral based rather than major drug or gang disputes.

### Additional Analysis based on Location/Density Mapping Review & Site Visits

In discussions with members of TPD, followed by potential target area site visits, it is clear that many of the hot spots and locations of violent incidents are clustered around housing projects and/or apartment complexes.

#### South City

- University Gardens Apartments
- Sunrise Place Apartments
- Leon Arms Apartments (contiguous to South City)

#### Frenchtown/Griffin Heights

- Springfield Apartments – Joe Louis
- Campus Walk Apartments

Tours of the areas support that they are manageable, although there are some potential challenges (detailed in the *Next Steps* section). The areas are relatively small in size, less than 2 square miles, which is a distance that is easily covered by a CV replication team.

### **Presentations**

CV presentations were delivered to City/County representatives, stakeholders and community members from both potential target areas.

There appears to be strong support for a Cure Violence replication. The majority of attendees clearly saw the need for an intervention and expressed interest in a health approach to violence.

Additionally, there were members of the community, both formerly involved individuals who are credible messengers, as well as residents, who could potentially be involved in the program. Buy-in from these individuals is crucial for purposes of implementation, as well a program success.

### **Tallahassee Memorial Hospital**

Presenting to the area's level 1 trauma center was the first step in developing a possible hospital-based intervention component as well identifying a source of data and

partnership. Staff easily understood the health approach, the need for a large health system to address violence, and the importance of immediate assistance and response when a penetrating injury occurs.

In order to garner additional support and to potentially launch a full scale hospital response component, if the City moves forward with replication, during the first six to twelve months of programmatic implementation it would be possible to have staff volunteer to provide hospital response on days identified as those experiencing the highest number of trauma cases. After the staff member has had sufficient time to prove the effectiveness of this component, a proposal could be submitted to the hospital to fund two full time hospital responder positions. These staff members would be strictly dedicated to addressing all violent injury cases that present at the hospital.

### **Next Steps**

#### **Challenges**

##### **1. Identification of Oversight Entity**

Successful Cure Violence replications are most often led by a local health department or organization. As a city agency, health departments have the capacity, knowledge, and expertise to provide oversight, monitoring, and administration of the project. Further examination is required to identify who could successfully play this role in Tallahassee.

##### **2. Identification of Community-Based Organizations for Implementation Purposes**

Many cities identify the community-based organization that will hire and manage program staff, as well as day to day operations, through an open request for proposals process. Often there are several candidates that have the capacity, and organizational structure to implement a program of this magnitude. Further analysis and examination is necessary to determine if there are Tallahassee organizations with these capabilities.

##### **3. Geography of target area(s)**

While not an immediate issue, should implementation occur, it is necessary to identify possible office location(s) within the target area(s). Due to the more rural environment, this could be challenging. Additionally, it will be necessary to develop specialized safety plan for canvassing, as well as locations where mediations can safely occur, as a result of the limited lighting, lack of sidewalks, and wooded areas within the neighborhoods.

## **Tentative Staffing Recommendations**

The two potential target areas are approximately five miles away from each other. While it may not be an insurmountable distance to be traversed by a single team it is not recommended.

Additionally, two separate teams are recommended due to the fact that both areas have separate and distinct "crews/cliques" inhabiting the areas. These groups would be best served by having individual teams with staff from their specific area who have the credibility to engage these highest risk individuals.

## **Program Cost(s)**

The cost to pilot a single site for one year is approximately \$400,000 - \$450,000. This cost includes \$325,000 - \$375,000 for programming (staff, office space, technology, community events, etc.) and \$75,000 for training and technical assistance (TTA) by Cure Violence. This proposal is based on implementation in only one of the target areas. To implement with fidelity, an additional \$325,000 - \$375,000 would be required to launch the program in a second target area. Cure Violence would not seek additional TTA funding, but would instead cover the needs of both sites for the initial TTA investment.

To implement the program in one target area, Cure Violence recommends a team of seven staff members: 1 FT Project Manager, 1 outreach supervisor, 3 to 4 outreach workers, and 2 violence interrupters.

If it is determined that launching in two target areas would be difficult to fund, it is recommended that one site is selected (Frenchtown or South City). Proving effective after year one would prove the need for expansion and may then make identifying funding sources easier.

While not ideal, additional examination of ways to fund two sites at a lower cost is possible. However, changing the staffing pattern and/or reducing funding for support services and community activities may not result in reductions seen in other replicating cities.

## **Conclusion**

In reviewing the data and meeting with TPD and other community stakeholders, it is clear that Tallahassee has the need, but also the ability, to implement the Cure Violence model.

Having an innovative police chief and strong support and leadership, specifically from Gloria Pugh and the members of the Community Leadership Council on Gun Violence, are instrumental for successful implementation. As such, Cure Violence would welcome the opportunity to launch a program in Tallahassee.

## **COST ESTIMATES**

Total projected cost estimates (society and government) in Tallahassee for violence involving a firearm or related instrument in 2014 equaled \$69,909,611. Murder resulted in the greatest projected loss of more than \$51 million chiefly as a result of the economic activity lost from premature end of life. Each murder carries a total cost of nearly \$5.7 million. These projections are considered conservative by comparison to the "value of a statistical life" of \$9.2 million used by the US Department of Transportation.<sup>1</sup>

Costs associated with firearm-related, assault injuries requiring hospital admittance in 2014 are projected at more than \$14.7 million or \$475,152 per incident. Less severe injuries with the same reported cause in 2014 totaled more than \$4 million or \$131,735 per incident.

**TOTAL ESTIMATED SOCIETAL AND GOVERNMENT COSTS: \$69,909,611**

### The Cost of Firearm Violence

Firearm injuries cost \$174 billion in the United States in 2010 and the government's firearm injury bill alone exceeded \$12 billion. PIRE researcher Ted Miller estimates annual firearm injury costs average \$645 per gun in America. The costs include medical and mental health care costs, criminal justice costs, wage losses, and the value of pain, suffering and lost quality of life. Violence - assaults and suicide acts - dominated the costs. These estimates are based on the latest injury data from the Centers for Disease Control and unit costs from the Pacific Institute for Research and Evaluation's (PIRE) widely cited injury cost model. Data was developed by Ted R Miller, PhD, Principal Research Scientist, Children's Safety Network Economics and Data Analysis Resource Center, at Pacific Institute for Research and Evaluation, December 2012. All incidence data are from CDC's WISQARS web query system, accessed December 2012.

**Societal Cost per Firearm Injury, United States, 2010**

	Work Loss	Medical Care	Mental Health	Emergency Transport	Police	Criminal Justice	Insurance Claims Processing	Employer Cost	Quality of Life	Total Cost per Firearm Assault	Total Cost per Firearm Injury, Other Intents
<b>Fatal</b>	\$1,552,381	\$28,741	\$10,883	\$544	\$2,119	\$395,221	\$2,361	\$8,980	\$3,093,750	\$5,094,980	\$4,699,759

	5%	81%	1%	13%	0%	100%
Government Cost	\$343,728,011	\$7,841,224,101	\$94,919,283	\$3,786,325,696	\$47,160,540	\$12,113,357,631
	3%	65%	1%	31%	0%	100%

These estimates were funded by the Health Resources and Services Administration, US Department of Health and Human Services, and by Public Health Law Research, a national program of the Robert Wood Johnson Foundation.

**Incidence of Firearm Injury by Intent, United States, 2010**

	Unintentional	Homicide/ Assault	Legal Intervention	Suicide Act	Undetermined	Total
Fatal	606	11,078	344	19,392	252	31,672
Hospital Admitted	5,956	27,377	848	4,385		38,566
Emergency Department Only	8,205	26,361	115	258		34,939
Total	14,767	64,816	1,307	24,035	252	104,925

**Medical Care** includes payments for hospital and physician care, as well as rehabilitation, prescriptions, allied health services, medical devices, and insurance claims processing. For fatalities, also include coroner and premature burial costs.

**Mental Health Care** includes payments for services by psychiatrists, psychologists, social workers, and pastoral counselors. Also includes insurance claims processing.

**Work Loss** includes wages, fringe benefits, and household work lost due to death and permanent or temporary disability

**Lost Tax Revenue** includes income taxes losses due to wage losses

**Criminal Justice** includes criminal justice processing, sanctions, legal defense, and incarceration costs

**Emergency Transport** includes ambulance, helicopter, and coroner transport costs.

**Police** includes costs of police response and investigation

**Criminal Justice** includes criminal justice processing, sanctions, legal defense, and incarceration costs.

**Insurance Claims Processing** is the cost of processing public and/or private health insurance claims

**Employer Cost** includes costs of recruiting and training replacements for workers who are killed or permanently disabled and juggling schedules due to temporary disability, as well as workplace disruption talking about firearm incidents

**Quality of Life** values the pain, suffering, and loss of enjoyment of life of people who were shot and their families; we did not value fear experienced by people who were not shot

**Direct Cost** includes out-of-pocket costs for medical and mental health care, emergency transport, police, criminal justice, and insurance administration.
